Answer every question. For multiple choice, circle the single best answer. Write short answers in complete sentences.

Part A · Multiple Choice

6 questions × 2 points = 12 points

1. A lake that is confined to a glacial cirque is called
 - a) a kettle lake
 - b) a moraine lake
 - c) a finger lake
 - d) a tarn
2. Sediments transported and deposited *directly* by glacial ice are known as
 - a) outwash
 - b) till
 - c) varves
 - d) glaciolacustrine sediments
3. A ridge of unsorted sediment marking the farthest advance a glacier ever made is called
 - a) a lateral moraine
 - b) a medial moraine
 - c) a terminal moraine
 - d) an esker
4. A long, sinuous ridge left behind when sediment deposited in a stream channel *within* the ice is exposed by a receding glacier is called
 - a) a drumlin
 - b) an esker
 - c) a kettle
 - d) a sandur
5. A depression formed when a block of ice buried in glaciofluvial sediment eventually melts is called
 - a) a kettle
 - b) a cirque
 - c) a col
 - d) a tarn

6. *Varves* are
- a) laminated lake sediments with a distinct coarse summer layer and fine winter layer
 - b) rounded boulders carried far from their source by ice
 - c) ridges of gravel deposited on an outwash plain
 - d) scratches cut into bedrock by rock fragments in the ice

Part B · True or False

2 questions × 1 point = 2 points

7. Lodgement till is normally unbedded and well compacted.
TRUE / FALSE
8. Glaciofluvial sediments are angular and completely unsorted.
TRUE / FALSE

Part C · Short Answer

2 questions × 3 points = 6 points

9. Explain the difference between *lodgement till* and *ablation till*.
-
-
-
-
10. Describe what happened at Glacial Lake Missoula, and what record those events left behind.
-
-
-
-
